

Sub C1
B1 concl.

an active matrix liquid crystal display within the display housing and connected to the display circuit, the liquid crystal display including an array of at least 75,000 pixel electrodes, the array of pixel electrodes, having an active area of less than 100 mm²;
a [backlight] light source that illuminates the array of pixel electrodes; and
a lens positioned to receive an image formed on the active matrix liquid crystal display [and] such that the lens magnifies the image.

- Sub C2 concl.*
B2 concl.
7. (Amended) A docking system for a wireless telephone comprising:
a handheld housing having a plurality of control elements and a connection port that electrically connects a display circuit within the housing to the wireless telephone attached to the housing;
a display subhousing carried by the housing and moveable between a storage position and an operating position;
an active matrix liquid crystal display within the display subhousing and including an array of at least 75,000 pixel electrodes, the array of pixel electrodes having an active area of less than 100 mm², the display being connected to the display circuit in the housing that receives image data from the wireless telephone;
a light emitting diode [LED] light source that illuminates the array of pixel electrodes carried by the display subhousing; and
a lens carried by the display subhousing and positioned to [receive] magnify an image formed on the active matrix liquid crystal display [and that magnifies the image].

- Sub C3*
B3 concl.
17. (Amended) A docking system for a wireless telephone comprising:
a housing having a plurality of control elements and a connector port that electrically connects a display circuit within the housing to a wireless telephone attached to the housing;
a display subhousing module movable from a storage position to an operating position relative to the housing;
an active matrix liquid crystal display within the display subhousing and including an array of at least 300,000 pixel electrodes, the display being connected to the display circuit such that image data received by the wireless telephone is displayed on the display;
